DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 4, 16, 21, 23, and 31-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fano.

Fano teaches location based agents used to provide shopping assistance to users.

Examiner notes that this includes identifying a functional significance of a user's location manually as a user selects a desired location from a list of locations he/she intends to visits, specifically malls (column 47, lines 40-46).

Fano further teaches utilizing a GPS receiver to determine a users exact location (column 47, lines 20-25). Fano then uses the determined location and the manually selected functional significance to determine a search parameter (column 47 lines 48-50). This search parameter is used to provide the user with location specific shopping assistance.

Examiner notes that Applicant's present invention, automatically determines the functional significance of a user's geographic location. Then uses this automatically determined functional significance to determine the search parameter.

In other words, Applicant's invention determines the users geographic location (most likely through a GPS receiver, but the claims are not limited to such a device, based on the broad nature of the claims, the user could submit the location manually though the enquiry device).

Art Unit: 3627

Based on this location, the present invention determines where the user is (e.g. is the user in a mall, in a specific store, on the highway). Based on this "function" of the location, the present invention is able to determine the type of information the user might specifically want and is able to define a search parameter. This parameter is then used to answer the user's search inquiry.

Examiner notes that the specific example of Fano, requires the user to manually indicate the shopping venue (functional significance), which is then used by the system to determine a search parameter and finally to answer user's search enquiry.

However, Fano teaches on column 48, line 45 through column 49, line 35 prediciting the value of a user's location. Specifically, Fano teaches automatically determining where a user is located (e.g. bowling alley versus post office). Further, by determining the functional significance of a user's location, the system is able to apply knowledge (geographical search parameter) in order to provide a user with location specific information.

Examiner asserts that these are the very concepts of Applicant's invention; determining a user's location and applying some functional significance to that location in order to provide the user with location-specific information.

Examiner further asserts that one of ordinary skill in the art at the time of the present invention, by combining the concepts taught by Fano in column 47, line 20-column 48, line 44 with the concepts taught in column 48, line 45 – column 49, line 35, in order to replace the manual entry of the user's intended shopping value with a predictive value of the user's shopping value. This replace thus represents Applicant's present invention. Specifically, a user's location is first determined (e.g. shop, mall, bowling alley, post office, restaurant etc). Based on the

user's location, the system of Fano applies a significance to constrain the information provided to the user (geographical search parameter).

Examiner notes that one of ordinary skill in the art would have been motivated to combine these teachings of Fano to supply the user with location-specific information.

Response to Arguments

Applicant's arguments with respect to claims 1-2, 4, 16, 21, 23, and 31-35 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
